EDUCATION

Full Stack Web Development, Avion School

May 2023

B.S. Entrepreneurship, De La Salle University Dasmarinas

February 2019

PROJECT WORK

Webby | Developer | [frontend code](#) | [backend code](#)

May 2023

A Ruby on Rails & React app that allows users to schedule online appointments for their website design ideas.

- Developed a profile picture upload feature using Active Storage
- Implemented an online appointment scheduling feature for users with admin management functionalities.
- Achieved a 98% test code coverage using RSpec and SimpleCov, ensuring code quality and reliability
- Implemented user authentication, registration, and email verification using bcrypt gem scalable to 1,000s of users per hour

Capital Office | Developer | [live](#)

January 2024

A Laravel & React app that manages the organization's sales, reports, documents and clients' accounts.

- Developed a user interface dashboard leveraging the capabilities of ArchitectUI

Fetch Workpapers | Developer | [live](#)

November 2023

A Laravel & PHP app that provides accountants with a transformative solution to simplify and automate their workpapers using Microsoft Excel.

- Implemented a payment functionality utilizing Stripe, enhancing the fluidity of the transactional process for flawless and efficient payments
- Developed an automated email system designed to promptly notify clients of significant account activities, ensuring timely communication and transparency regarding key transactions
- Created a multiple customized command console that effectively reduced the coding workload
- Developed the backend/API using Ruby on Rails, following RESTful architecture and MVC architecture

Banking App | Developer | [code](#)

November 2022

A banking React Application that allows an admin to oversee user accounts and facilitate account-to-account transactions.

- Developed a user interface for banking app using Tailwind CSS for all the pages
- Developed an admin feature to manage user accounts and facilitate user transactions
- Implemented a feature that enables users to perform deposit and withdrawals

Elder Armor USA | Developer | [live](#)

June 2022

A WordPress web application that sells undergarment products online.

- Implemented a payment feature using WooCommerce plugin
- Utilized Elementor plugin alongside the WordPress editor to craft the front-end design

Slackers App | Developer | [code](#)

December 2022

A React app where registered users are able to send and receive messages and create channels.

- Developed 6 user interfaces for a messaging app using Tailwind CSS and Daisy UI
- Implemented 8 REST API requests for account creation, sign-in and message retrieval
- Designed 6 front-end components using Javascript for users to send direct messages, create channels, and add users to channels
